

Spending group Meeting  
Recap  
10/1/15

I thought I would throw together a quick recap of the meeting. Make sure I got everything we covered. And allow anyone to add to the list if they think of something.

We will be meeting again next Wednesday Oct 7 at 2:45 in the library. Same location.

We are each going to make an algorithm and UML of the basics of what we want the Spending App to do.

1. Track Income
2. Track Expense
3. Have preset and user set categories
  - a. Rent/Mortgage
  - b. Food/Grocery
  - c. Fuel
  - d. Loans
  - e. Savings
  - f. Credit Cards
  - g. Entertainment
  - h. Add Category
4. Have a user rating system
  - a. According to user category importance
  - b. 100 coin rating system
5. Be able to calculate each category's running balance of coin allocation rating system.
6. Be able to calculate running balance of overall Income vs expenses
7. Be able to set up a user profile

Anything that doesn't look right about this be sure and let us all know so we can all be on the same page for creating the UML for next Wednesday.
